ABOUT US

CERTIFICATES

AKOS Dış Ticaret Ltd. Şti. is one of the biggest aluminium systems manufacturer that grows fast with AKOS brand name in the world market since 2006.

AKOS smart aluminium railing systems has been recognized in five continents and dozens of countries and have been accredited by international certifications. The AKOS brand, which is completely focused on the foreign markets, brings the future to the highest level with the innovation and qualified human resources. ISO 9000-2015 certification as been documented.

With it's series, it produces detailed architectural solutions for every different market and culture. AKOS products are an indispensable part of artistic and modern designs with the products developed by the innovation center, it solves all kinds of applications with ease. Our first priorities are environmental awareness and life safety. Systems with this issue have been given full marks from international organizations.

Through it's dealerships in different countries, AKOS has created representations that enable the desired product to be achieved in a timely manner. In the following years, AKOS aims to be in closer contact with it's customers from five continents.

We wish to have a great success with our customers for many years.

INDEX

ALUSMART 500 Series

Alusmart 500 Series provides maximum security and elegance that appeals to every taste. With these certified models, you can add elegance to your house, office, café and so on!

06/51

Alumax 400 Series

Our main point to design this serie; maximum option and maximum durability! All our customers can use certified Alumax Series with Elliptical, Squareline, Classical Series and with all kind of glass types. Low stock costs - wide model choice!

akos®

The Alusmart Series railing system is ideal for both indoor and outdoor applications. The most frequently used areas are hotels, public spaces, public buildings, offices, houses with modern design and villas.

- Rich range of products
- Multi-product typology and synthesis
- Very simple production possibility despite different solution alternatives
- Quality material with modern design (anodized quality)
- Affordable access to end users
- Resistance to various climatic conditions and long life.
- Contrary to expectations, low-cost aluminum
- Alternative materials
- High stock level and efficient sales service network at Akos scale.

• Thanks to the rail profile; a high degree of inertia and a strong connection can be made.
• High structural strength, profile design provides maximum security.
• Because of the glass compression device is made planar and aluminum profile, it does not deform in use for many years and provides high inertia to the system.
• Thanks to the oval and angled cover selections,, it is the best choice for those who want architectural aesthetics.
• In the sequential arrangement of the products, it eliminates the problem of obliqueness.

Option 1

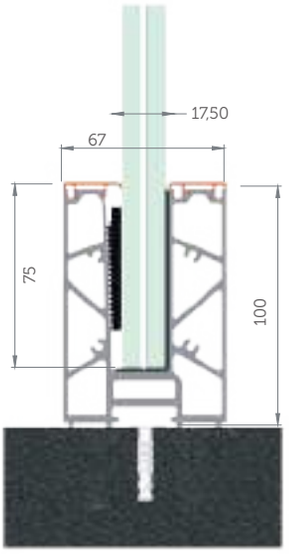
In this application,
we have to combine:

6105 as 6-meter whole profile then we need 6148 as 6-meter whole profile. 6148 will be polished and anodized. (2 pieces 6148 for 1 piece 6105) Inside of the system, there will be 500-012 according to your glass dimensions due to tighten and secure the glass.

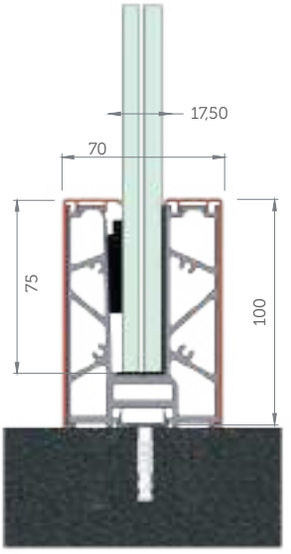
Option 2



In this application,
we have to combine:

6105 as 6-meter whole profile and 6107 as 6-meter whole profile. Both 6105 and 6107 will be polished and anodized. (2 pieces 6107 for 1 piece 6105) For Inside of the system, there will be 500-012 according to your glass dimensions due to tighten and secure the glass. If your Project is not Wall to Wall, also 500-503 will include as an endcap.

Option 3



In this application,
we have to combine:

2911 as 6-meter whole profile due to aligning the system. 500-101 and 500-102 according to your glass and Project dimensions. (500-101 and 500-102 has plastic compression sets inside) On the last step, 6106 as 6-meter whole profile due to cover profile. This product will be polished and anodized. Also, If your Project is not Wall to Wall, you will need 500-503 as an endcap.

Everyone who uses Akos products are more or less familiar with the operation logic of our Alusmart A11 system. The A51, which we developed this year, combined the operation logic of A11 with the usage of 6 meters of profile. It is possible to balance the glass to be used in the project with A51 on problematic surfaces that need to be adjusted to the glass.

With its unique plastic structure inside, allows us to align the glass approximately 3° on both sides. Also 6 meter whole profile usage makes the montage process even easier. As a standard, the A52 system has been developed for 8 + 8 laminated glass, which is commonly used in European Countries. It offers maximum robustness and maximum safety in such uses.

Also with the unique plastic thickening apparatus, A51 system is suitable with 6+6 laminated glasses as well. It is also possible to use this system in pieces with the cover profile to be used outside. In this way, there will be a decrease in costs. Even so, the system offers greater strength than its competitor's thanks to its thick profile structure.

The A52 system will be the best solution for anyone who is solution-oriented and cares about time. While the A52 system provides maximum durability with minimum labor, it is also a system that can be used in any project thanks to the glass adjustment.

ALUSMART **A52** Series

Brand new A52 provides to use 6 meter whole profile system with 6+6 laminated glasses. Also with the unique plastic thickening apparatus, A52 suitable with 5+5 laminated glasses as well. In this way, project owners will save on both glass costs and glass supporter costs.

Thanks to its small but maximum durability profile structure, A52 is the most robust glass supporter system with minimum costs. Another advantage of our A52 system is that it takes up less space from the space on the balconies thanks to its tiny structure. In this way, it also offers the best solution for small balconies.

As a result, A52 will offer the most suitable solution for all project owners who want to achieve maximum benefits with minimum costs.

Ultimate alignment has never been easier!

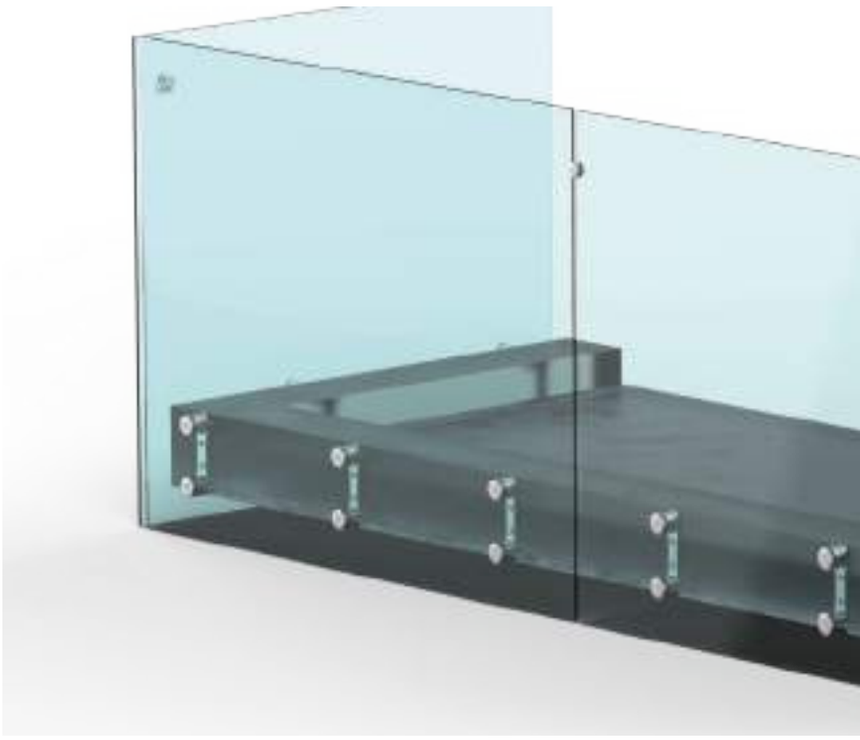
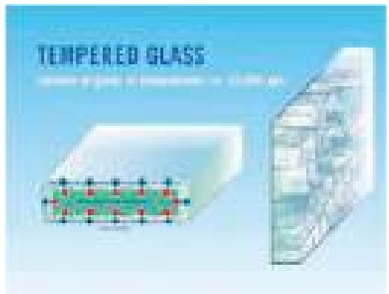
akos®

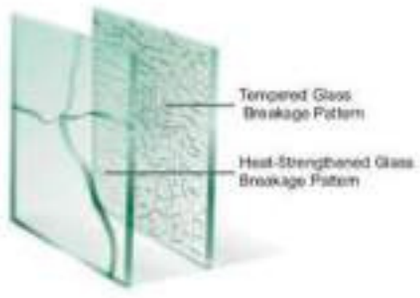


Use of glass panels in AKOS installations A wide range of glass panels can be integrated with AKOS system, in various thicknesses and characteristics according to specifications. There are two main categories according to EN12543 and EN12600 specified by the European Union concerning the thermal treatment of the glass. More specifically, EN12543 specifies the use of tempered and laminated glass with the insert of PVB membranes.

This type of glass panels has the following qualities:

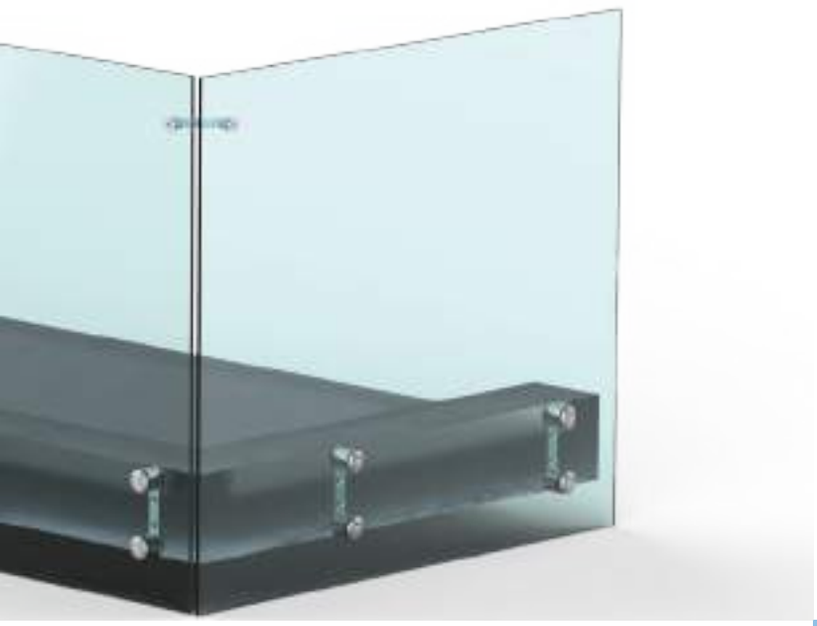
a) In case of breakage, they do not break in large and sharp pieces.





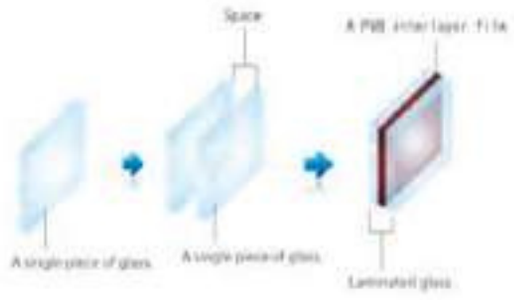
LaminatedGlass TRIPLEX glasswith PVB membrane

b) Even in case of such breakage, the broken glass pieces remain attached on the PVB surface without putting in danger the safety of nearby persons. The fabrication of these tempered and laminated glass panels is being carried out by thermal treatment of ordinary glass which is afterwards sandwiched together with the PVB membranes to give the various grades and thickness of laminated glass panels.



AKOS GLASS

(PVB), placed in layers between the glass.
Rollers press the layers together to expel any air pockets.



Toughened Glass Thermally Toughenedglass

In the following pictures show the different types of breakage:

a) Tempered and laminated glass, and,
b) Ordinary tempered glass.
PVB films the common characteristics amongst the two categories mentioned previously, are the use of the PVB interlayer films.

AKOS GLASS

The glass is then heated to 70o C in a pressurized oil bath to permanently bond all layers together. Typically, the thickness of each PVB film is 0,38 mm, additional layers of glass and PVB film increase the strength of the material. Applying two interlayers of film, the thickness becomes 0,78 mm, with three at 1,14 mm and so on. Apart from the different thickness of glass and PVB, a wide range of colored PVB, for example grey, blue green or yellow is available, offering a particular esthetique to modern buildings.

According to European Norms (EN 12600) the minimum number of films required is two, however AKOS recommends the use of glass with four PVB films for maximal security. Even in the event that the glass breaks, the two layers are held together by the PVB, allowing the sheet as a whole to bend and absorb the impact. This characteristic is especially important for places where safety or security are paramount. Types of security glasses the most common type Triplex glass consists of the combination of Heat Strengthened Glass – PVB – Heat Strengthened Glass. The result of a Heat Strengthened glass panel will resist two times stronger than ordinary glass, where a unified static force has been applied (EN 12543), to one of the same thickness. The second type of Triplex glass, and the one which meets the safety criteria is Thermally Toughened Glass, and its combination with PVB, known as toughened glass. Toughened Glass is manufactured by subjecting the finished glass size to a heating and cooling treatment which set up high compressive stresses at the surface, and balancing tensile stresses in the center of the glass, thus increasing its strength. The result is a glass that is 5 times stronger than ordinary glass. Heat strengthened glass is produced by a similar process to toughened glass, however, the strength developed is about half that of toughened glass, and its breakage resembles that of annealed glass. AKOS strongly recommends the use of Heat Strengthened Glass with the installation of any type of AKOS system.

- NOTE:Also; AKOS can do some mechanical operations on the glass in the direction of the customer's request. Connection holes, rodaj etc.
- Please contact us regarding Glass and PVB colours.
- The loads are made with wooden boxes for minimal deformation. The weights given are the weight of wooden boxes.

Profilés Aluminium & Accessoires

akos®

A wide chart of different models and accessories merges in traditional cornered design! Squarline 200 Series has more than 100 different aluminium accessories and 13 different aluminium profiles for all demands.

- It is produced squarely and minimizes the risk of injury in crashes thanks to its unsharp corner profile design.

- It offers safer and more aesthetic solutions for those who can not give up on square designs.

- An extensive number of accessories and profiles, anodizing according to seaside class standards make any kind of application possible.

- The system is certified for its sound engineering design by international institutes. Due to their high resistance to severe weather conditions, AKOS railings can be seen in all five continents.
